SURPASSING EXPECTATIONS WITH A REAL DISTILLATION

The MicroDist[®] analyzer is designed to determine the boiling range characteristics of various commercially available petroleum products, light and middle distillates on process streams in a fast and reliable way.

The easy-to-use MicroDist[®] allows a complete distillation of the product in less than 10 minutes. The results obtained correlate to the ASTM D86, ASTM D7345, ISO 3405 test methods and their analogs. Thanks to the fast and reliable measurements that match those obtained by quality control laboratories, the MicroDist allows a precise and continuous adjustment of the process streams.

KEY ADVANTAGES

EQUIVALENT OR BETTER PRECISION THAN D86

- Direct correlation with ASTM D86 with equivalent or better precision and excellent repeatability ($\pm 1.5^{\circ}\text{C}$)
- Validate calibration with reference stream (1+2 multi-stream option)
- Built-in nitrogen generator (optional) - facilitates operation with only instrument air (4-10 bar)

INNOVATIVE TECHNOLOGY FOR HIGH AVAILABILITY

- High levels of automation and hardware advancements
- Real distillation eliminates the need for models or “simulated” distillation
- Perfect result on first analysis even for “unknown” samples
- Fully automated regeneration of flask minimizes maintenance requirements

ROBUST AND RELIABLE PROCESS CONTROL

- Fully automated Initial Heat, Distillation Rate and Final Heat Regulation
- Under 10 minute cycle time - with the smallest sample volume
- Robust results for petroleum products including jet fuel, diesel, gasoline and naphtha (Group 1-4 fuel types)

INCREASE PROFITABILITY

- Maximize production reducing product downgrade due to poor cut point optimization
- Prevent product giveaway by measuring online “real” distillation curve on your final product
- Optimize product blends to improve quality with a fast analytical technique

ROI STUDY: SIGNIFICANT HIGHER PROFITS

Less variability translates into tighter control capabilities and allows upgrade maximization from low to high value product. Increasing T90% by 1°C may result in 0.5 to 1% additional diesel production:

- Depending on production capacity this can impact up to \$1M on incremental profits
- MicroDist provides the means for this optimization while assuring that diesel specs are met

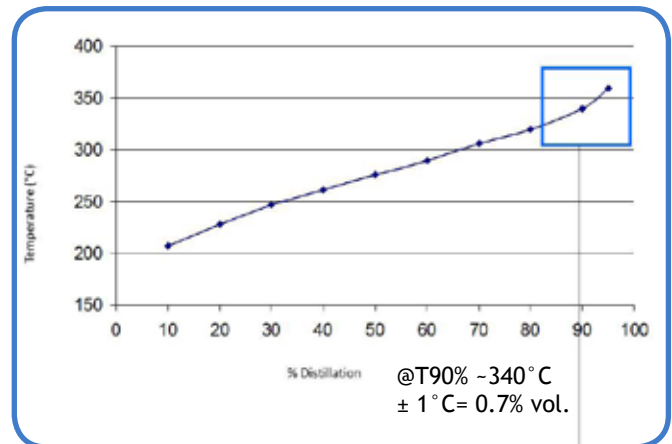

BASE CASE

- HDT Diesel Capacity: 22000 bpd
- 1°C Optimization impact
 - 0.7% vol
 - 152 bpd
- Residual Fuel to ULSD upgrade: 29 USD/ bbl
- Yearly impact: 1,1M USD

LEADING TECHNOLOGY FOR ONLINE DISTILLATION

MicroDist has been adopted around the world as the preferred on-line distillation solution at major firms. This preference is driven by its performance, ease of use and reliable operation that results in short investment payback and high ROI.

The optional density meter can be used as a stand-alone measurement, or used to calculate the Cetane Index in accordance with D4737 and D976.
